DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 2, 5-7, 9-12, 14-18, and 22 (renumbered 1-15) are allowed.
2. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 2, 5, and 14, claim 1 disclose a method comprising determining a head positioning profile for a first track in relation to a track profile for the first track, a track profile for a second track, a track profile for a third track and a non-zero weighting value, the method further comprising a prior step of comparing the track profile for the first track to a predetermined threshold, and performing the determining step in relation to said comparison, wherein a track profile is represented by WI, the first track is represented by n, the second track is represented by n-1, and the third track is represented by n+ 1, the head positioning profile is represented by ZAP(n), and wherein $ZAP(n) = -WI(n) - \alpha * [WI(n-1) + WI(n+1)]$, where alpha is a number between 0 and 1, which is neither disclosed or an obvious variation of the prior art.

Regarding claims 6, 7, 9, 10, 15, and 16, claim 6 disclose a method of compensating for positioning errors in a data storage device comprising a step of determining a head positioning profile for a first track in relation to a track profile for the first track in combination with a track profile for a second track and a non-zero weighting value, wherein the head positioning profile of the determining step is further determined in relation to ZAP information for a third track, which is neither disclosed or an obvious variation of the prior art.

Regarding claims 11, 12, and 17, reasons for allowance are as discussed in the previous Office action mailed January 18, 2006.

Art Unit: 2627

Regarding claims 18 and 22, claim 18 discloses a method comprising steps of comparing a first track profile for a first track to a predetermined threshold, and determining a head positioning profile for the first track in relation to the first track profile, a second track profile for a second track, and a third profile for a third track when the first track profile has a first value relative to the predetermined threshold, else not determining a head positioning profile for the first track when the first track profile has a second value relative to the predetermined threshold, wherein a track profile is represented by WI , the first track is represented by n , the second track is represented by $n-1$, and the third track is represented by $n+1$, the head positioning profile is represented by $ZAP(n)$, and wherein $ZAP(n) = -WI(n) - \alpha * [WI(n-1) + WI(n+1)]$, where α is a value between 0 and 1, which is neither disclosed or an obvious variation of the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
